

🚀 Thrilled to Share My Latest AI Adventure: Building a Powerful AI Agent Suite with CrewAI and FastMCP! 🚀

Hey LinkedIn fam! I've been diving deep into the world of AI agents, and I'm excited to showcase my recent project: a cutting-edge suite of AI Agents designed to supercharge web search, memory management, and intelligent response generation. This isn't just code—it's a symphony of AI orchestration that's pushing boundaries! 🌟

First off, a quick shoutout to **CrewAI**—the open-source framework that's revolutionizing multi-agent systems. In just a few lines: CrewAI lets you create collaborative AI agents that work together like a dream team, handling complex tasks autonomously with seamless integration of LLMs, tools, and workflows. It's flexible, scalable, and perfect for building intelligent systems that mimic human-like collaboration. If you're into AI orchestration, CrewAI is a game-changer!

At the heart of my suite are **three powerhouse AI Agents**:

- **Web Search Agent:** Hunts down real-time info from the web like a digital detective.
- **Memory Storage Agent:** Safeguards and retrieves knowledge with lightning speed.
- **Response Generator Agent:** Crafts smart, context-aware replies that feel truly human.

These agents are powered by **OpenAI** for cloud-based muscle or a local **Ollama** instance for privacy-focused, on-device magic—giving you the best of both worlds! 💡

But wait, the real magic happens with **two MCP Servers by FastMCP**:

- **Linkup-powered MCP Server:** Enables seamless tool integration and web search capabilities.
- **Graphiti-powered MCP Server:** Handles agent memory like a pro, ensuring nothing gets forgotten.

I leveraged an arsenal of top-tier tools to make this suite robust and efficient:

- **Opik** for LLM evaluation and tracing—keeping everything performant and debuggable.
- **LinkupSearchTool** for lightning-fast web searches.
- **MCP Server** for effortless tool integration across agents.
- **Graphiti MCP Server** for advanced agent memory management.
- **Zep** as the knowledge-based graph for structured data handling.
- **Graphiti** (Zep's open-source graph engine) for building dynamic graphs.
- **Neo4J** Database for rock-solid graph storage and querying.

This setup isn't just functional—it's a blueprint for scalable AI solutions that can tackle real-world challenges head-on. Whether it's research, customer support, or creative brainstorming, these agents are ready to level up your workflow!

Entire code is accessible here with multiple Readme.md 📖
